

Text wrap issue

As I was editing I wanted to wrap text around the building the Gherkin. At first I clicked all the appropriate buttons and tools in order to do so, however it did not work. After several attempts I resulted to using YouTube to find out a way of how I could do it.

Originally the page looked like this when the text was not wrapped around the building. After watching the videos on Youtube I realised I had to extract the building only out of the original image and then use the wrap text tool. After editing the background out, the image of the gherkin looked like this. I then pasted it on top of the existing picture. The final outcome looked like the image below.
